Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-4 and 13, drawn to a semiconductor apparatus and a method thereof is comprised of a data analyzer which comprises a logic circuit and a flip-flop, classified in class 714, subclass 734.
 - II. Claims 5 and 6, drawn to a semiconductor apparatus comprising comparator for comparing input signals, classified in class 714, subclass 719.
 - III. Claims 7-8, 9-10 and 11-12, and 14 drawn to a semiconductor apparatus and a method thereof for memory testing by comparing memory outputs with expected values, classified in class 714, subclass 718.
2. Inventions I, II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as analyzing an input signal to determine whether the input signal is in a predetermined state; this is a patentably distinct feature not found in inventions II nor III. Furthermore, Invention II has separate utility such as comparing two input signals by each comparator; this too is a patentably distinct feature not found in inventions I nor III. See MPEP § 806.05(d).

Art Unit: 2133

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
